

### 3.3 Subtraction of Integers

Recall the scenarios from section 3.1:

<p><b>A.</b> I have \$5 in my pocket, but I owe \$10 to my brother. If I give my brother \$5, how much will I still owe him?</p> <p>We can illustrate this by the sum</p> $5 + (-10)$  <p>I still owe \$5, thus my net worth is <b>-5</b> dollars.</p>	<p><b>B.</b> If I owe \$5 to my cousin and \$10 to another cousin, how much do I owe altogether?</p> <p>We can illustrate this debt by the sum</p> $-5 + (-10)$  <p>I owe 15 dollars, thus my net worth is <b>-15</b> dollars.</p>	<p><b>C.</b> I have \$20, but owe \$10 to my friend. If I give \$10 to my friend, how much money do I have left?</p> <p>We can illustrate this by the sum</p> $20 + (-10)$  <p>I have <b>10</b> dollars left.</p>
---	---	--

Suppose the scenarios changed as follows:

<p><b>A.</b> My brother has forgiven my debt to him and tells me I no longer owe him the \$10. How much money do I have now?</p> <p>We can illustrate this by the following</p> $5 + (-10) - (-10)$  <p>Notice that</p> $\begin{aligned} & 5 + (-10) - (-10) \\ &= -5 - (-10) = 5 \\ &= -5 + 10 = 5 \end{aligned}$ <p>I had a net worth of <b>-5</b> dollars, but when my brother forgave my debt to him, my net worth increased to <b>\$5</b>.</p>	<p><b>B.</b> One of my cousins has forgiven my debt of \$10. How much do I owe now?</p> <p>We can illustrate this debt by the following</p> $-5 + (-10) - (-10)$  <p>Notice that</p> $\begin{aligned} & -5 + (-10) - (-10) \\ &= -15 - (-10) = -5 \\ &= -15 + 10 = -5 \end{aligned}$ <p>I owed <b>15</b> dollars, but now I only owe <b>5</b> dollars. Thus my net worth is <b>-5</b>.</p>	<p><b>C.</b> My friend has forgiven my debt of \$10. How much money do I have now?</p> <p>We can illustrate this by the following</p> $20 + (-10) - (-10)$  <p>Notice that</p> $\begin{aligned} & 20 + (-10) - (-10) \\ &= 10 - (-10) = 20 \\ &= 10 + 10 = 20 \end{aligned}$ <p>I had <b>10</b> dollars left, but now I have <b>\$20</b>.</p>
--	---	--

Problem	Integer counters	Number line model
$6 - 2 = 4$	Take away 2 	
Alternative method	Remove "0" pairs 	
$6 + (-2) = 4$		
$6 - (-2) = 8$	Take away -2 	
Alternative method		
$6 + 2 = 8$		
$-2 - 4 = -6$	Take away 4 	
Alternative method		
$-2 + (-4) = -6$		
$-5 - (-2) = -3$	Take away -2 	
Alternative method	Remove "0" pairs 	
$-5 + 2 = -3$		

<i>Demonstration Problems</i>	<i>Practice Problems</i>
1. (a) $5 - (-3) =$	1. (b) $12 - (-5) =$
2. (a) $-3 - (-5) =$	2. (b) $-6 - (-8) =$

Answers: 1. (b) 17; 2. (b) 2

<i>Demonstration Problems</i>	<i>Practice Problems</i>
<b>3. (a)</b> $-18 - 12 =$	<b>3. (b)</b> $-25 - 13 =$
<b>4. (a)</b> $-42 - (-35) =$	<b>4. (b)</b> $-53 - (-24) =$
<b>5. (a)</b> $-15 - (-2) =$	<b>5. (b)</b> $-12 - (-3) =$
<b>6. (a)</b> $-53 - 25 =$	<b>6. (b)</b> $-37 - 32 =$
<b>7. (a)</b> $-245 - 299 =$	<b>7. (b)</b> $-108 - 172 =$
<b>8. (a)</b> $52 - (-35) =$	<b>8. (b)</b> $42 - (-35) =$
Answers: <b>3. (b)</b> $-38$ ; <b>4. (b)</b> $-29$ ; <b>5. (b)</b> $-9$ ; <b>6. (b)</b> $-69$ ; <b>7. (b)</b> $-280$ ; <b>8. (b)</b> $77$	

<i>Demonstration Problems</i>	<i>Practice Problems</i>
<p>Simplify.</p> <p><b>9. (a)</b> <math>(-8 - 2) - 5 =</math></p>   <p><b>10. (a)</b> <math>14 - 42 - 35 =</math></p>   <p>Let <math>x = -3</math> and <math>y = 5</math> and evaluate the following:</p> <p><b>11. (a)</b> <math>x - y =</math></p>   <p><b>12. (a)</b> <math>x + y =</math></p>   <p><b>13. (a)</b> <math>y - x =</math></p>	<p>Simplify</p> <p><b>9. (b)</b> <math>(-5 - 3) - 1 =</math></p>   <p><b>10. (b)</b> <math>15 - 53 - 24 =</math></p>   <p>Let <math>x = -2</math> and <math>y = 8</math> and evaluate the following:</p> <p><b>11. (b)</b> <math>x - y =</math></p>   <p><b>12. (b)</b> <math>x + y =</math></p>   <p><b>13. (b)</b> <math>y - x =</math></p>
Answers: <b>9. (b)</b> -9; <b>10. (b)</b> -62; <b>11. (b)</b> -10; <b>12. (b)</b> 6; <b>13. (b)</b> 10
