

5.2 Decimals Operations

Let's revisit the following example from section 4.6 and compare addition of fractions to addition of decimals.

I found a dollar and one quarter in the pocket of my jacket.			\Rightarrow	$1\frac{1}{4}$	\Rightarrow	\$1.25		
I found three dollars and 2 quarters in the pocket of my sweater.			\Rightarrow	$+ 3\frac{2}{4}$	\Rightarrow	<u>+\$3.50</u>		
How much money in total did I find?	\Rightarrow	4 dollars		3 quarters	\Rightarrow	$4\frac{3}{4}$	\Rightarrow	\$4.75

Here is another example:

Total rainfall in Tehama County in January – June of 2017	\Rightarrow	$17\frac{64}{100}$ inches	\Rightarrow	17.64
Total rainfall in Tehama County in July – December of 2017	\Rightarrow	$+ 3\frac{91}{100}$ inches	\Rightarrow	<u>+ 3.91</u>
Total rainfall in Tehama County in 2017	\Rightarrow	$21\frac{55}{100}$ inches	\Rightarrow	21.55

In general, to add (or subtract) decimals, we line up like place values, add the columns and carry, if necessary. Alignment of the decimal points first will assure the other place values are properly aligned. Fill in the sum below.

Comparison of multiplying decimals with multiplying fractions:

	\Rightarrow	$\begin{array}{r} 0.70 \\ \times 0.3 \\ \hline 0.210 \end{array}$	\Rightarrow	<p>Compare with:</p> $\frac{3}{10} \times \frac{7}{10}$ $= \frac{21}{100} = 0.21$
<p>What is the cost of $\frac{3}{10}$ pounds of bananas that costs \$0.70 per pound?</p>				$\$0.70 \times \frac{3}{10} = \0.21

	\Rightarrow	$\begin{array}{r} 3.25 \\ \times 0.1 \\ \hline 0.325 \end{array}$	\Rightarrow	<p>Compare with:</p> $\frac{325}{100} \times \frac{1}{10}$ $= \frac{325}{1000} = 0.325$
<p>How much is $\frac{1}{10}$ the dosage of 3.25 mL of an antibiotic?</p>				$3.25 \text{ mL} \times \frac{1}{10} = 0.325 \text{ mL}$

In general, to multiply decimals:

2. Multiply the numbers using the algorithm for whole numbers.

$$\begin{array}{r} 3.25 \\ \times 0.1 \\ \hline 0.325 \end{array}$$

1. Line up the right-most digits.

3. Count the number of decimal places in the factors.

4. Place the decimal point in the product so that the number of decimal places is the same as the sum of decimal places in the factors.

Comparison of dividing fractions with dividing decimals:

$$\begin{array}{r} 6.85 \\ 2 \overline{)13.70} \\ \underline{12} \\ 17 \\ \underline{16} \\ 10 \\ \underline{10} \\ 0 \end{array}$$

Compare with:

$$\frac{13.70 \cdot 50}{2 \cdot 50} = \frac{685}{100} = 6.85$$

$\$13.70 \div 2 = \6.85

Two people shared this burrito that cost \$13.70. What was the cost to each person?

$$\begin{array}{r} 20. \\ 7.5 \overline{)150.0} \\ \underline{150} \\ 00 \\ \underline{00} \\ 0 \end{array}$$

Compare with:

$$\frac{150}{7.5} = \frac{150 \cdot 10}{7.5 \cdot 10} = \frac{1500}{75} = 20 \text{ doses}$$

$150 \text{ mL} \div 7.5 \text{ mL} = 20 \text{ doses}$

How many 7.5 mL doses are contained in a 150 mL bottle of antibiotic?

In general, to divide decimals...

...if the divisor is a whole number:

$$\begin{array}{r} 6.85 \\ 2 \overline{)13.70} \\ \underline{12} \\ 17 \\ \underline{16} \\ 10 \\ \underline{10} \\ 0 \end{array}$$

1. Bring the decimal point straight up.

2. Divide using the algorithm for division of whole numbers.

...if the divisor is a decimal:

$$\begin{array}{r} 20. \\ 7.5 \overline{)150.0} \\ \underline{150} \\ 00 \\ \underline{00} \\ 0 \end{array}$$

1. Move the decimal point in the divisor and the dividend the number of places needed to make the divisor a whole number.

2. Annex zero(s), if necessary in the placement of the decimal point.

3. Bring decimal point straight up.

4. Divide using the algorithm for division of whole numbers.
